

Electrolux

FREEZER/REFRIGERATOR TR916

User's Handbook

IMPORTANT:
PLEASE READ THE
INSTRUCTION BOOK
BEFORE USING THIS
APPLIANCE

IMPORTANT USER INFORMATION

It is most important that this instruction book should be retained with the appliance for future reference. Should the appliance be sold or transferred to another owner, or should you move house and leave the appliance, always ensure that the book is supplied with the appliance in order that the new owner can be acquainted with the functioning of the appliance and the relevant warnings.

These warnings are provided in the interest of safety. You must read them carefully before installing or using the appliance.

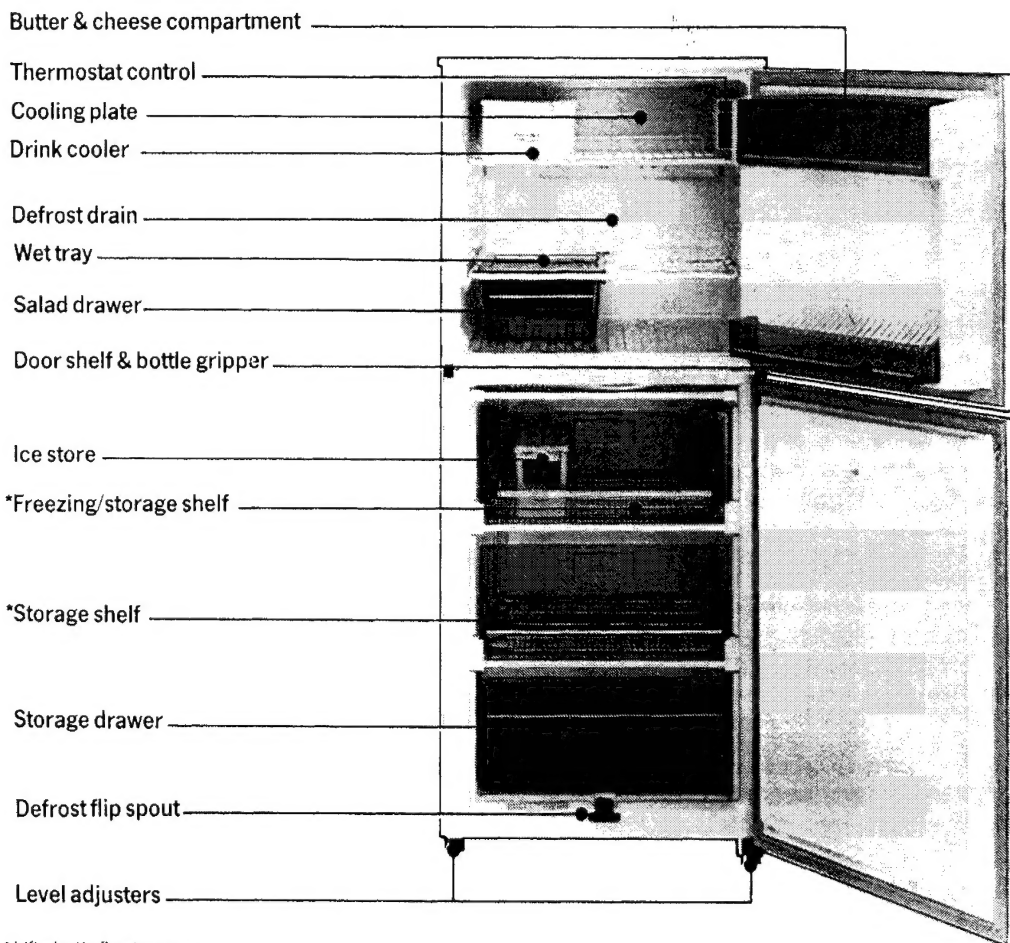

- This product is designed to be operated by adults. Children should not be allowed to tamper with the controls or play with the product.
- Any electrical work required to install this appliance should be carried out by a qualified electrician.
- This product should be serviced by an authorised Electrolux Service Engineer, and only genuine Electrolux spare parts should be used.
- It is dangerous to alter the specifications or modify this product in any way.
- Care must be taken to ensure that the appliance does not stand on the electrical supply cable.
- Electrolux domestic freezer/fridges are designed to be used specifically for the storage of edible foodstuffs only.
- There are working parts in this product which heat up. Always ensure that there is adequate ventilation as a failure to do this will result in component failure and possible food loss. See installation information.
- Parts which heat up should not be exposed. Wherever possible the back of the product should be close to a wall but leaving the required distance for ventilation as stated in the installation information.
- Before defrosting, cleaning or maintenance work is carried out, be sure to switch off the appliance and unplug it.
- The cooling plate and aluminium lining or refrigerated freezer shelves in this appliance contain channels through which the refrigerant passes. If these are punctured this would cause substantial damage to the appliance and result in food loss. **DO NOT USE SHARP INSTRUMENTS** to scrape off frost or ice. Under no circumstances should solid ice be forced off the lining or shelves. Solid ice should be allowed to thaw when defrosting the appliance. See defrost instructions.
- The appliance should be left for 2 hours after installation before it is turned on in order to allow refrigerant to settle.
- This appliance is heavy. Care should be taken when moving it.
- Ice lollies can cause frost burns if consumed straight from the freezer.
- Frozen food must not be refrozen once it has thawed out.
- Manufacturers' food storage recommendations should be strictly adhered to. Refer to relevant instructions.
- Do not place carbonated or fizzy drinks in the freezer as it creates pressure on the container which may cause it to explode resulting in damage to the appliance.
- Under no circumstances should you attempt to repair the appliance yourself. Repairs carried out by inexperienced persons may cause injury or more serious malfunctioning. Refer to your local Electrolux Service Centre and always insist on genuine Electrolux spare parts.

As a general guide to fitting any plug

- Ensure the lengths of wire inside the plug are prepared correctly.
- Connections should be firmly made after all conductor strands are entered into the terminal posts.
- When preparing the cable ends take care not to damage the outer sheath, or the insulation surrounding the inner conductors.
- Tighten all screws.
- Replace the top cover of the plug and secure.

SAFETY NOTE

If this appliance is replacing an old one which is going to be scrapped, please remove the door or lid before disposal to prevent children from becoming trapped inside.

* Lift plastic flap to open.

Your new Electrolux freezer/fridge has two separate compartments. The automatically defrosted fridge compartment is at the top; the freezer compartment at the bottom will store frozen food and freeze quantities of fresh food.

For best results, it's important that you read all the contents of this handbook before you use your freezer/fridge.

At first you may be aware of sounds in your kitchen which you are not used to, particularly if your freezer/fridge is against sound-reflective surfaces

such as tiled or painted walls. Please remember the cooling units include precision-built components which, like those in car engines and other machinery with fast moving parts, need a running-in period which may last for several weeks. During this period, don't worry, — just allow the appliance time to settle down.

Before using your freezer/fridge for the first time, we advise you to wash the inside and fittings as described on page 15, under 'cleaning'.

About your freezer/fridge

Where to install it

The chosen position for your freezer/fridge may make it preferable to change over the hinges and door handles to reverse the door hang. To do this, refer to 'Changing over the door hinges' on page 16.

For the cooling unit to work efficiently, your freezer/fridge should be located in a dry atmosphere, out of direct sunlight and away from extreme temperatures, e.g. not next to a cooker or other sources of direct heat, or in a very cold room e.g. an outhouse, where the temperature may fall below 6°C (43°F).

Leave a clearance of at least 50mm (2ins) above the cabinet and do not obstruct the space underneath. The back of the cabinet may be placed close to the wall but should not touch it. Do not install in a small pantry or other places with restricted ventilation.

Your freezer/fridge will be heavy when loaded with food and must therefore be stood on a strong firm floor. It should also be level. Adjust the level by screwing out the appropriate level adjusters in the feet using your fingers or a spanner.

Make sure the appliance is upright and all adjusters are in firm contact with the floor so that the cabinet does not rock in any direction.

Connecting to the mains

Check that the voltage shown on the data plate conforms with your mains supply.

WARNING —

THIS APPLIANCE MUST BE EARTHED.

If this appliance is fitted with a non-rewireable plug for which your socket is unsuitable the plug should be cut off and an appropriate plug fitted. The removed plug should be disposed of as insertion of the plug into a 13 A socket is likely to cause an electrical hazard. If it is necessary to change the fuse in a non-rewireable plug the fuse cover must be replaced. If the fuse cover is lost or damaged the plug must not be used until a replacement is obtained. Replacement fuse covers are available from your nearest Electrolux Service Centre (see page 18). It is important that the colour of the replacement fuse cover corresponds with the coloured insert or as embossed in words on the base of the plug.

IMPORTANT

The wires in the mains lead of this appliance are coloured in accordance with the following code:-

GREEN-and-YELLOW	: EARTH
BLUE	: NEUTRAL
BROWN	: LIVE

If a 13A (BS 1363) plug or non rewireable plug is used the freezer fridge must be protected by a 13A ASTA approved (BS 1362) fuse. If any other type of plug is used the circuit should also contain a 13 amp fuse.

As the colours of the wires in the mains lead may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:-

Connect the GREEN-and-YELLOW coloured wire to the plug terminal marked letter E or earth symbol \perp or coloured green or green-and-yellow. Connect the BLUE coloured wire to the plug terminal marked letter N or coloured black.

Connect the BROWN coloured wire to the plug terminal marked letter L or coloured red.

If at any time a replacement lead is required, the cross sectional area of its conductors must not be less than 0.75mm².

About your freezer/fridge (cont'd)

If a *lower* temperature is needed (e.g. during hot weather), turn the thermostat knob to a higher number or, for less cooling, to a lower number.

Setting the control

To start the cooling system, plug into the wall socket, switch on and set the thermostat knob between settings 3 and 4.

The fridge and freezer compartment temperatures will be affected by location, room temperature and frequency of door opening, and adjustment of the thermostat setting may be needed to allow for this.

When operating, the outside, front edges of the freezer may feel warm to the touch. This is quite normal.

We advise you to run your freezer/fridge for a day before storing frozen food.

Temperature control

With the thermostat knob at the recommended setting, the temperature in the refrigerator will be suitable for the storage of most fresh foods, salad vegetables, milk, certain wines and other drinks, while the freezer temperature will be suitable for the long term storage of frozen foods under most conditions of use.

The required temperature inside the fridge compartment is from 0°C to 7°C (32°F to 45°F) inside the freezer compartment is – 18°C (0°F) below.

During prolonged periods of abnormally hot weather if the thermostat is set on too high a number, the cooling system may operate continuously and the fridge compartment cooling plate may not defrost. Turning the knob to a lower number will cause automatic defrosting to resume.

Using the fridge compartment

The fridge compartment provides suitable shelf space to store most kinds of fresh food and has a usable storage capacity of 98 litres (3.5 cu. ft.).

Suggested fresh food storage times

Storage times will vary according to the type of food and how fresh it is when put into the fridge compartment but no food should be stored for longer than the times stated opposite.

Drink cooler

The drink cooler has a capacity of approximately 3 litres.

Fill the drink cooler with your favourite fruit drink, diluted squash, etc. and position it towards the front of the upper cabinet shelf with its spout protruding through the bars.

To dispense a drink, simply hold a glass under the spout and push in the button.

IMPORTANT. Clean your drink cooler regularly to prevent a build-up of sugary deposits. If deposits do form, soak in warm water until they dissolve then pour fresh water into the container and operate the dispenser button a few times to ensure it is free.

Suggested maximum storage times

Type of food	Storage time
Uncooked fresh meat	
poultry, beef, and lamb	3 – 5 days.
pork	2 – 4 days.
sausages	3 days.
mince & offal	1 – 2 days
Cooked meat	
ham, sliced meat	2 – 3 days.
pies	1 day
casseroles & paté	2 days
poultry	2 – 3 days.
Bacon	1 week
Dairy produce	
milk	2 – 3 days.
cream	1 week
butter	3 – 4 weeks.
hard cheese	3 – 4 weeks
soft cheese	1 week.
Vegetables & Salads	1 week
Fruit	2 weeks

Using the freezer compartment

The  symbol means that your freezer will store food at -18°C (0°F) for long term storage and will also freeze fresh food.

Storing frozen food

Your freezer compartment has the following capacities:

Nett Storage Volume 101 litres (3.6 cu ft).

*Weight of Stored Food 32.3 kg (71 lb).

**(This is a standard measurement and the actual capacity depends upon the density and sizes of food. The above figures are based on an average density of 0.32 kg per litre).*

Pre-packed commercially frozen food should be stored in accordance with the manufacturer's instructions for 3 star frozen food compartments and should be put into the freezer as soon as possible after purchase. Your freezer provides for long term storage which generally means up to 3 months but the length of storage time can vary and it is important to follow the recommended times shown on packets of commercially frozen food.

Storage times for home prepared fresh frozen foods are given on Pages 10, 11, and 12. For your convenience, maximum storage periods for popular home frozen items are also given, in months, on the plastic flap at the front of the freezing shelf.

If your freezer/fridge breaks down or the power fails, don't open the freezer door and the frozen food won't be affected for up to 24 hours.

Any frozen food which is allowed to thaw accidentally should either be eaten as soon as possible or thrown away. Alternatively, if the food is uncooked and it has not been completely defrosted it can be cooked then refrozen. (Note that some items must be thawed completely before cooking — see page 13).

Defrosted cooked food must never be refrozen.

Freezing fresh food

General information

In any 24 hours you can freeze as much as 12 kg (26.4 lb) of fresh food.

Existing frozen foods should be re-arranged to leave space on the top shelf for freezing. The packets to be frozen (see pages 8 and 9) should be placed on the top shelf in contact with the refrigerated surface as far as possible and spaced apart to allow cold air to circulate between them. They should not touch existing packets. Leave the thermostat at its usual setting.

When the food has frozen (which will take up to 24 hours) depending on the amount), transfer it to the other shelf or the plastic drawer, if there is room, to leave space on the top shelf for further freezing.

Practical Hints

Different foods need different methods of preparation and some will keep longer than others.

Of course, you can freeze practically anything, but don't waste space in your cabinet by storing foods which are readily available throughout the year.

Fruit is ideal — especially the softer varieties. But avoid pears because they lose their texture and discolour and bananas which will turn black.

Vegetables and herbs too are ideal, but salad vegetables and marrows are unsuitable because they contain too much water. Celery loses its crispness, so should be cooked first, and tomatoes are best frozen as purée. Onions should be chopped fine and frozen in small quantities.

All poultry, meat and fish freeze well, as do baked goods, though for shorter periods.

As for prepared foods, these too can be frozen with confidence, but there are a few points to bear in mind.

Semi-liquid foods have a tendency to thicken, so should be made up a little slacker than normal. Highly spiced and aromatic dishes should be wrapped really thoroughly, so the flavour doesn't spread to your other frozen foods. Always cool them quickly and then freeze immediately.

General Preparation

For freezing purposes always choose the finest quality fresh foods.

Fruit & Vegetables

Fruit and vegetables should preferably be frozen immediately after harvesting or at least kept in a refrigerator for no longer than twenty-four hours. For perfect results fruit should be *just* ripe, and if any shows signs of being damaged it should be discarded. Most vegetables and some fruit need to be blanched before freezing to retard enzyme reaction. Timings for individual types are given in the detailed tables that appear later in this booklet.

Meat

Freeze joints in handy-sizes after removing waste such as bones, fat and so forth. Game must be hung for the desired period and cleaned *before* being frozen.

Fish

Should preferably be frozen within twenty-four hours of being caught. Any superfluous scale should be removed along with the fins, then the fish gutted and washed clean in cold salted water before being frozen.

Poultry

Gut, singe and wash birds thoroughly. Tie legs and wings to the body before placing in the freezer, or cut into joints for packing separately — giblets should be packed separately, where possible.

Dairy Products & Baked Items

See individual details in tables which appear later in this booklet.

Prepared Foods

These freeze well, but remember that seasonings will become intensified during frozen storage, so be very sparing and add whatever you like when ready for eating. Salt actually shortens the storage time for all types of frozen foods, so add only a little during preparation.

Blanching

Where necessary, (see remarks column on page 11), plunge vegetables into boiling water for the specified period, timing from the moment of return to boil. Then drain and cool immediately in iced water before packaging and freezing.

Packaging

Proper packing is one of the most important points about food freezing, if the true quality is to be preserved.

All food should be carefully wrapped in airtight moistureproof materials. It should be completely covered and as much air as possible shut out to prevent 'freezer-burn' — those blemishes which appear on thawing.

The majority of materials you are likely to require will be readily obtainable from your own home freezer supplier, the larger stationery shops and department stores. Most useful are heavy gauge polythene bags or sheeting and plastic containers with tight-fitting lids — also the thicker kinds of aluminium foil.

As far as possible, try to pack food in even shapes and sizes to maximise the space available in your freezer cabinet and facilitate removal when required at a later date.

Labelling

The self-adhesive type of label is probably the most useful as it can be used on every kind of surface. Each label should show clearly what kind of food is in the package, its approximate weight or likely number of servings, the date of initial storage and any comments relevant to ultimate use.

In addition, keep a little notebook handy to enable you to rotate your stocks and check your family's requirements on a daily basis for future reference, so you can plan your household budget accordingly.

Ice Making

The freezer compartment includes an ice store enabling you to build up a supply of ice cubes for a forthcoming party or spell of hot weather when ice will be in demand. The ice tray fits in the top of the store.

First, make ice cubes by filling the ice tray with fresh drinking water to the top of each ice cube compartment and placing the tray in the top of the ice store, or, for quickest ice-making, directly on the freezer shelf.

When the ice cubes have formed, hold the tray upside down over the ice store and twist the tray along its length, allowing the loosened cubes to fall into the store.

Several makings of ice cubes can be accommodated and, of course, you can also leave the ice tray full of cubes, conveniently placed on top of the ice store.

Freezing Foodstuffs — Individual Characteristics

	<i>Max. Storage Period</i>	<i>Method</i>	<i>Remarks</i>
MEAT joints			
Beef	10–12 months	Cut to handy size. Wrap thoroughly	
Pork	6–9 months	Cut to handy size. Wrap thoroughly	
Lamb	9–12 months	Cut to handy size. Wrap thoroughly	
Offcut Steak	10–12 months	Separate with cellophane layers	
Chops	see Pork or Lamb above	Separate with cellophane layers	Wrap carefully to protect against puncturing by sharp bones
Veal Fillets	6–9 months	Separate with cellophane layers	
Bacon, cured smoked	6 weeks 1 month	Separate with cellophane layers	Pack in handy meal portions
Sausages	6 weeks	Wrap tightly	Pack in handy meal portions
Minced meat	2 months	Wrap tightly	Pack in handy meal portions
Offal and tripe	3 months	Clean thoroughly. Pack in small portions	Make sure it is really fresh
POULTRY			
Chicken	9–12 months	Clean in usual way, joint if necessary	Wrap giblets separately — do not stuff till ready
Turkey	9–12 months	Clean in usual way, joint if necessary	
Duck, Goose	6 months	Clean in usual way, joint if necessary	
Giblets	3 months		Wrap separately from bird
GAME			
All types	6 months	Hang before freezing, prepare as for poultry	Cook immediately after thawing
FISH			
All types	3–6 months	Clean, discard head and tail, wrap separately	Must be fresh
Trout	4 months	Clean, discard head and tail, wrap separately	Must be fresh
Salmon	4 months	Clean, stuff with greaseproof paper for shape retention, or cut into steaks	Must be fresh
VEGETABLES			
Mushrooms	12 months	Wash, dry thoroughly. Freeze loose (or sautéed in a little butter till partially cooked, then freeze)	Pack viable quantities in boxes

	<i>Max. Storage Period</i>	<i>Method</i>	<i>Remarks</i>
Potatoes	10 – 12 months	New potatoes and chips can be frozen raw. Otherwise cook partially in one of usual forms, cool then freeze	
Beans	12 months	Peel or pod, and wash	Blanch for 2 mins., cool for same time in iced water then freeze
Carrots	12 months	Use small ones. Prepare	Blanch for 5 mins.
Cauliflower	12 months	Break up into florets	Blanch for 3 mins.
Spinach	12 months	Wash thoroughly. Remove thicker veins	Blanch a few leaves at a time, for 2 mins.
Sprouts	12 months	Use only small ones. Remove outer leaves	Blanch for 3 mins.
Root crops	12 months	The younger the better. Peel and slice or freeze whole	Blanch for 3 mins.
FRUIT			
Apples	9 – 12 months	Freeze either of two ways: As purée-stew with little water, beat to smooth pulp, sweeten to taste, cool. OR Sliced-blanch for two minutes, drain and cool. Pack tightly in layers with a little dry sugar sprinkled between, if so desired; or soak in slightly salted water for ten minutes, dry and freeze	Freeze in small quantities. Pack in plastic containers, leaving ½" headroom ditto
Apricots	10 – 12 months	Preferably remove stones, but leave skins on. Pack in syrup ½ – 1 lb. sugar to 1 pint of water, making sure fruit is covered	Pack in plastic containers, leaving ½" – 1" headroom
Cherries	12 months	ditto	ditto
Damsons	12 months	ditto	ditto
Plums	9 months	ditto	ditto
Gooseberries	12 months	ditto	ditto
Blackberries	12 months	Either pack in syrup as above, or coat with caster sugar and pack in plastic containers. Also may be frozen loose: spread on trays allowed to freeze overnight and then packed in containers	ditto
Currants	12 months	ditto	ditto
Raspberries	12 months	ditto	ditto
Strawberries	12 months	ditto	ditto

	<i>Max. Storage Period</i>	<i>Method</i>	<i>Remarks</i>
Peaches	10 months	Cover with boiling water for 1 minute, then cool by dipping into cold and peel carefully. Cut into halves, removing stone. Use syrup method of packing and freezing	Keep fruit submerged in syrup; place crumpled greaseproof paper on top, so there is no room between the surface of the liquid and the lid

DAIRY PRODUCTS

Egg Whites	10 months	Eggs must always be separated. Place whites in small containers just a few at a time	Eggs frozen in their shells will crack
Egg Yolks	10 months	As for whites, but to prevent coagulation mix with ½ tsp. salt or 1 tsp. caster sugar to every two yolks	Use for savoury or sweet dishes accordingly
Butter	6 months (unsalted) 3 months (salted)	Wrap bought butter in foil and freeze	
Cream Whipping and Double only	4 months	Must first be beaten lightly before freezing	Allow slight room for expansion in the container
Cheese	8 months (soft) 3 months (hard)	Wrap all varieties tightly in foil	Hard cheese stores much better when grated

BAKED ITEMS *Wrap in foil or polythene bags*

Bread (Freshly baked)	1 – 2 months		
Cakes, plain	6 months	Just wrap and freeze	
Cakes, iced	3 months	Freeze without wrapping, then wrap and store in polythene	

PREPARED FOODS

Stews	2 months	May be frozen quite satisfactorily in a polythene bag	
Sauces	4 months	Freeze in quantities of ½ pint. A little extra liquid may be required, when you come to use it	Egg based sauces are unsuitable
Full courses	3 months	Assemble individual helpings on specially constructed aluminium trays, then cover with foil. To re-heat leave the cover on and put in the oven for about 45 minutes at 400°F (200°C)	Cover slices of meat with gravy to prevent drying out

Thawing food

Thawing Food

Fruit

Keep container closed and allow to thaw at room temperature for about five hours.

Vegetables

No thawing needed — place in salted boiling water, cover and time cooking from moment of return to boil. It only takes a few minutes. Can also be put in the oven with a knob of butter. Chips and courgettes can go into hot fat.

Meat, Poultry etc.

Small jointed items don't require thawing before cooking, but always choose a moderate temperature and allow for a longer cooking time than normal so the meat cooks right through.

However, large items, such as a whole chicken must be thawed first; allow two to three hours per pound at room temperature, then proceed as usual.

Dairy Products

Allow eggs to thaw in closed containers and use immediately. Butter and cream will thaw in one to two hours at room temperature.

Baked Items

Bread takes about two hours to thaw or loaves may be heated in the oven. Cakes can be sliced in their frozen state to retain shape and speed the thawing process.

Prepared Foods

Heat gently in closed containers in the oven.

Commercial Packs

Simply follow the printed instructions.

Important points to remember

DO ...

adjust the level of your freezer/fridge before loading it with food, — see page 4.

cover or wrap liquids and foods, particularly those with strong odours.

put vegetables and salads in the salad drawer in plastic bags.

cover melons and pineapples and only store for short periods.

rotate stocks of frozen foods; date markings will help with this.

keep the refrigerator drain outlet clear; if blocked carefully clean it with a piece of flexible curtain wire.

leave the doors ajar when the freezer/fridge is not in use.

DON'T ...

obstruct air circulation in the fridge by tightly packing stored items.

put hot food in the fridge or freezer.

let food or containers touch the refrigerator cooling plate.

store bananas in the fridge or freezer.

put bottles or cans of fizzy drinks in the freezer.

give children iced lollies straight from the freezer, they could cause frost burns.

use a sharp instrument to hasten defrosting or to remove ice trays.

leave the drink cooler with residues in it which might harden or go stale. Always rinse out and dry the container as soon as it becomes empty.

use the wet tray in any other domestic appliance e.g. a microwave.

Looking after your freezer/fridge

How to defrost

The *Fridge Compartment* is defrosted *automatically*. Defrost water from the cooling plate runs out of the drain and onto a tray on the motor compressor where it is evaporated. This process is completely automatic. Droplets of water on the cooling plate during defrosting are quite normal and will freeze on the plate afterwards.

In the *Freezer Compartment* frost accumulates on the refrigerated shelves during normal working and should occasionally be removed using a stiff bristle brush or a plastic scraper.

Heavy frosting (about ¼" thick) will reduce the freezer's efficiency and therefore complete defrosting should then be carried out, probably at 6 month intervals depending on usage. Preferably you should do this when there is little or no food in the freezer in the following manner.

1. Any remaining frozen food should be placed in another freezer, or placed in cardboard boxes and wrapped in blankets or layers of paper. Put in a cool place.
2. Switch off at the wall socket and remove the plug.
3. Fold out the defrost flip spout, put a suitable container under it to collect the defrost water, and leave the door open.

4. Defrosting can be speeded up by putting bowls of hot (not boiling) water on the shelves and loosening the frost with a stiff bristle brush or a plastic scraper.

5. After defrosting, clean and dry the interior as explained under "Cleaning", and fold back the defrost flip spout.

6. Replace the plug, switch on, replace any frozen food, and close the door.

REMEMBER, if the temperature of frozen food is allowed to rise unduly during defrosting, its storage life may be shortened.

Cleaning

The most suitable time to clean your freezer/fridge is after defrosting the freezer and remember to first switch off and pull out the plug.

Both compartments and all the fittings should be thoroughly cleaned with a clean cloth wrung out in a solution of one teaspoonful of bicarbonate of soda in each pint of water.

Never use detergents, abrasive powders, highly perfumed cleaning materials or wax polishes to clean the interior as these will damage the surfaces and leave a strong smell.

The outside should be occasionally dusted or wiped over with a damp cloth and a small amount of detergent. But not the door seal, which should be cleaned only with soap and water and thoroughly dried.

A small amount of wax polish applied every few months will maintain the gloss finish of the outside. The motor compressor and condenser at the rear should also be cleaned of dust occasionally using a brush, but make sure the freezer/fridge is unplugged when you do this.

Occasionally, strong smelling food may leave the fridge with a slight odour. Placing a small dish of bicarbonate of soda powder in the fridge should slowly absorb these smells. The dish should be refilled periodically.

Going on holiday

Don't switch off at the mains if you intend to leave food in the refrigerator and/or freezer.

For 2 days or less there is no need to remove any food from the refrigerator. For up to 1 week remove all food except eggs, butter and bacon.

If you are leaving both the refrigerator and freezer compartments empty, switch off at the wall socket, defrost, clean and dry, **and leave both doors open.**

Changing the light bulb

Should the interior light fail to work, *first switch off and pull out the mains plug*, and then replace the bulb as follows:-

Remove the light cover by removing the screw at the rear with a screwdriver and pulling the rear outwards toward the middle of the cabinet. Unscrew the bulb and replace it with a new S.E.S. 10 or 15 watt bulb (available from your local Electrolux Service Centre as listed on Page 18).

Replace the cover by engaging its front edge in the recess in the light housing, push the rear toward the side of the cabinet and replace the screw.

Something not working

the small foot assembly. The small foot (9) can now be removed by removing screw (10). In order to remove the large foot/hinge assembly (11), screws (12 & 13) should be removed making sure that the spacer (14) is retained with the assembly.

10. Pull out the lower hinge pin (15) which may have come away with the hinge blade or remained in the door. Push the pin (rounded end) into the bush at the bottom of the door on the side opposite to its original position.

11. Taking care not to press down on the door. The large foot/hinge assembly should be transferred over to the opposite side of the cabinet and screws (12 & 13) moved over to their new positions in the hinge foot (see fig. 4). It is important that the spacer (14) is retained with screw (12) in the channel between the base of the product and the foot/hinge assembly when screwing the foot/hinge assembly into its new position.

12. Refit the small foot, its screw entering the hole furthest from the front on the flat portion of the base.

13. Replace the level adjuster (8).

14. Stand the appliance upright.

15. Using a blunt knife blade or similar instrument, carefully prise out the plastic plugs from the alternative handle positions on the opposite sides of the doors. (Protect the paintwork from damage with masking tape or other suitable material between the blade and painted surface).

16. Transfer the handles to their new positions and push the plastic plugs into the vacated screw holes

17. Side adjustment to the upper door can be made by loosening the screw (1) and moving the bottom of the door sideways a little (with the hinge plate) to the left or to the right. Be sure to support the door firmly while doing this and re-tighten the screw before testing. **Remember finally to carefully level the fridge/freezer by means of the level adjusters (8) in the feet.** — see page 4.

Before you call for a Service Engineer, carry out these simple checks:

Is there a power failure? Check your house lights. If so, keep the freezer door closed until the power is restored.

Is the plug firmly connected to the wall socket and is the socket switched on? Check the power supply by plugging in another appliance or a table lamp.

Is the fuse in the plug intact and are the wires in the mains lead correctly connected to the plug? (See "Connecting to the Mains", page 4).

Have you turned the thermostat to the correct setting?

Have the doors been left open causing the temperature to rise?

Sometimes the freezer door will be difficult to open shortly after you have closed it. Don't worry: this is due to a pressure difference which will quickly equalise and allow the door to open normally.

If after checking these points, your fridge/freezer still won't work, call your nearest Electrolux Service Centre without delay. It is listed overleaf.

When calling, tell us your name, address with postcode, telephone number and what appears to be wrong. Also the Model number of your fridge/freezer and when and where you purchased it.

For future reference we suggest you record these details here, and keep the receipt with the handbook as proof of purchase.

Guarantee

This Guarantee is offered to you as an extra benefit and does not affect your legal rights.

Electrolux products are carefully designed, manufactured, tested and inspected and in consequence we undertake to replace or repair any part found to be defective in material or workmanship, within one year of delivery to the original purchaser, free of charge.

ADDITIONALLY, DURING THE SUBSEQUENT FOUR YEARS, ANY DEFECTIVE PARTS WILL BE REPLACED FREE — LABOUR COSTS ONLY BEING CHARGEABLE.

The Company does not accept liability for defects arising from neglect, misuse, or accident. The interior light bulb, and glassware, are excluded from the guarantee and the drink cooler is covered for the first year only.

There are certain conditions which may invalidate this guarantee:

- a) It is dependent upon the appliance being correctly installed and used in accordance with the Company's instructions under normal domestic conditions within the United Kingdom or the Republic of Ireland.
- b) Service at all times must be carried out by an Electrolux service representative or authorised agent.
- c) The guarantee may be invalidated by unauthorised repair or modification of the appliance.

Proof of the date of purchase will be required before service under guarantee is provided. Addresses or telephone numbers for service requests are listed opposite.

We must point out that this guarantee does not cover liability for loss of food or other contents, but would draw your attention to the insurance facilities described on the separate leaflet.

FREEZER/REFRIGERATOR TR916 — A LUX MODEL, MADE IN BRITAIN

This appliance conforms with the requirements of
EEC Directive No. 82/499 relating to radio interference.

In accordance with its policy of progressive product design
the Company reserves the right to alter specifications.
